

# DNS Web Filtering

**Do you have control of online threats and inappropriate content?**

## What is *DNS web filtering*?

DNS web filtering is defensive software that prevents cyber security threats by following simple logic: if a website has something potentially dangerous within it, DNS filtering blocks a user from visiting it in the first place.

It's a zero-trust solution that leaves nothing to chance.

## What is *inCONTROL*?

- ✔ **Protects your business**  
Blocks phishing, malware, ransomware, and internet-based risks at the DNS level to maximise productivity.
- ✔ **Simple to deploy**  
Cloud-based solution with no hardware or software installation required.

## Why should your organisation filter DNS?

**Pre-Emptive Protection**  
Stop threats before they hit your network

**Granular Control**  
Manage exactly how your network and devices are used.

**Threat Visibility**  
Gain insight into risks that could impact your network.

**Boost Productivity**  
Block time-waster sites and keep focus sharp.

**User-Level Insights**  
Report on sites and apps used by employees.

## What are the benefits of *inCONTROL*?

**Protect your business**  
Protection against phishing, malware, and ransomware at the DNS level.

**Zero-Touch Deployment**  
Easy to deploy and manage, with no hardware or software installations required.

**Custom Filtering**  
Customisable filtering policies to meet specific business needs.

**Real-Time Intelligence**  
Real-time domain categorisation and threat intelligence.

**Actionable Analytics**  
Detailed reporting and analytics.
